

Qualifacts® iQ

Making a meaningful difference with artificial intelligence (AI)

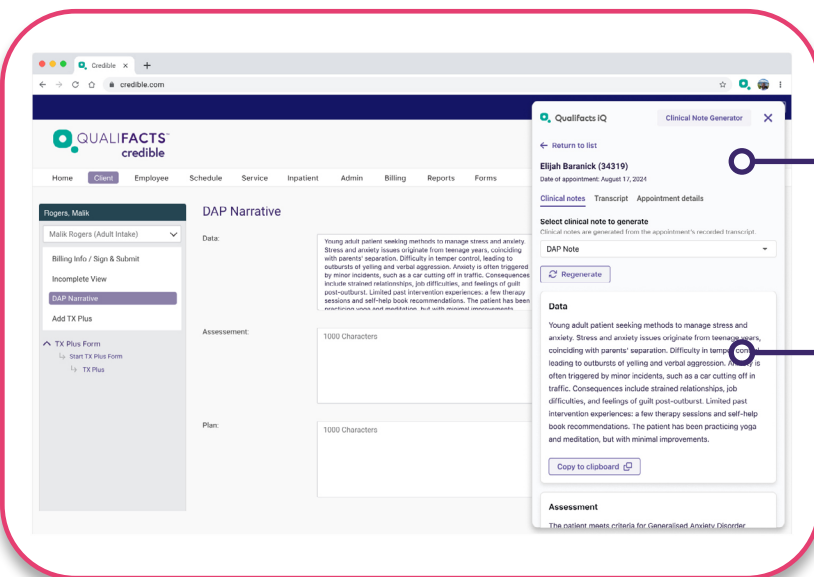

- More time with clients, less time on documentation
- Purpose-built for behavioral health
- Highly secure and privately hosted
- Rapidly advancing large language models (LLMs)
- Designed exclusively for Qualifacts EHRs

Our collective mission, accelerated with AI

With approximately 1 in 5 Americans facing mental health challenges and a scarcity of accessible care, it is crucial for our industry to harness cutting-edge AI to meet these urgent needs. We're confident Qualifacts iQ can make a meaningful difference for our customers and the communities they serve through automation.

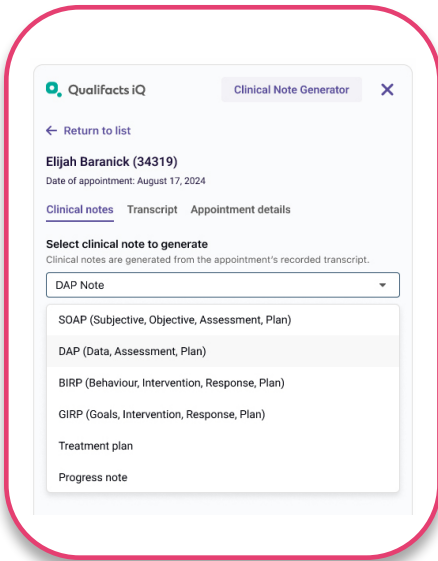

Save time & gain efficiency	Improve clinician & staff satisfaction	Leverage leading data & expertise	Trust our secure & private environment	Increase compliance & reimbursement

Qualifacts customer data never leaves our secure, privately hosted environment, at any time.

Qualifacts iQ sits unobtrusively beside users throughout their EHR workflows.

Notes are unique and preserve the tone and terminology used during the appointment.

Automatically generate your clinical notes

Here's how **Qualifacts® iQ** works:

1. Access from your browser.
 - Over time, Qualifacts iQ will be deeply embedded into your Qualifacts EHR (Credible, CareLogic, or InSync). No additional login required.
2. Qualifacts iQ automatically transcribes the appointment recording and then generates properly formatted clinical notes in the format you choose.
3. In just a few clicks, you can copy the auto-generated text and drop it into the clinical note in your EHR.
4. Review and edit within the EHR as needed, and you're done! You now have comprehensive clinical documentation in your EHR that drive continuity of care, accurate billing, and complete and compliant client records.

Qualifacts® iQ is hosted within a secure, private environment alongside Qualifacts' EHR solutions and comprehensive behavioral health data set.

Accurate, complete, and clinically relevant results

After completing extensive market validation with third-party industry and technology researchers, as well as our clinical subject matter experts (SMEs), Qualifacts developed its own in-house AI solution that leverages rapidly advancing, commercially available large language models (LLMs).

Advancements in LLMs are outpacing proprietary models and Qualifacts' ability to move seamlessly between LLMs ensures our ongoing ability to offer the best efficiency and clinically relevant results possible. As AI technology rapidly evolves, we will continue nurturing our LLMs in a way that is safe, easy-to-use, and tailored to behavioral health.

We're just getting started

The initial use case for Qualifacts iQ is automated clinical documentation. Qualifacts also plans to expand AI functionality to include additional use cases* such as:

- **Suggestive intelligence**
- **Predictive modeling**
- **Smart scheduling**
- **Enhanced quality assurance**
